11) OK button – When in video mode this button acts as the “REC & stop” button. When in photo mode –short press – to take a picture. When in a Menu – use this button to confirm selection.

### **1.3 Special Function Description:**

#### **The G-sensor function**

When there is an abrupt acceleration (e.g. accident) up to 6g ( $1g = 9.80 \text{ m / sec}^2$ ), the camera will automatically save the current video, so it can no longer be deleted automatically by the camera.

#### **LOCK function**

Pressing this button, saves the currently recording video fragment, so it can no longer be deleted automatically by the camera.

## 2: Basic instructions for camera use:

### Switching the camera On and Off

Press and hold the power button  to power on the camera - the blue indicator light will be lit.

Again press & hold the power button , the blue light goes out and the device is turned off,

**Note:** If the battery runs low, the camera will automatically shutdown – in this case please attach a power source.

### Video mode

Short press (if needed) of the  key, switches to video camera mode, the upper left corner of the screen displays a camera icon;

Short press of the  button to start the camera, the camera icon will flash and a red dot indicates the recording is active.

### Photo mode

Short press (if needed) of the  key, switches to photo mode, in the upper-left corner of the screen the photo camera icon is displayed

Short press of the  button to take pictures

### Video / photo playback mode

Short press (if needed) of the  key to switch to playback mode, in the upper-left corner of the screen the playback icon appears.

Use the up & down arrow keys to select the desired photo or video file and press OK to play (video only)

### Menu setting

Short press the Menu button  to enter the first tab of the menu "video settings". A 2<sup>nd</sup> press of the Menu button  switches to the 2<sup>nd</sup> tab of the menu "camera settings". Use the arrow keys to navigate through both these menu's and press OK to open menu items and confirm changes. When finished, just press the  key again to exit the settings menu.

## Time & date

As above - Short press the Menu button  twice to enter the 2nd tab of the menu, the “camera settings”. Use the arrow buttons to select the “date /time” option and press  to confirm. Use the arrow keys to modify the various parts of the date (dd/mm/yy) and press OK to confirm changes. When done, press the Menu button  to close the menu screen.

## USB mode

When you connect the camera via USB to the computer, you will see a popup menu in the camera LCD display. There are three modes to choose from:

- 1: USB-Disk - In this mode, video files or photo files on the SD-Card can be accessed from the PC (Camera is used as mass storage device)
- 2: PC-Camera (optional) – Selecting this mode to enable web cam function
- 3: PictBridge – used only for PictBridge compatible printers etc.

## Battery charging instructions

There are three ways to charge the battery, (see below) during this process in all cases the red charging indicator light will be lit. The total charging time is about 180 minutes. The red charging indicator light will automatically switch off after the charging is finished.

- 1: Use a 5V USB power adapter – (not included)
- 2: Use the PC-USB charging cable - included
- 3: Use the vehicle power charger - included

**Note:** If the camera stops operating (e.g. because of a software crash), please use a pointed implement to press and hold the reset button to restart the camera.
