ELECTRICAL REQUIREMENTS

FOR USA AND CANADA ONLY

For chrome plated models only:

CAUTION : To ensure continued protection against risk of electric shock connect to properly earthed outlets only

For all other models: To reduce the risk of electric shock, this equipment has a polarized plug (one blade is wider than the other). This plug will fit in a polarized outlet only in one way. If the plug does not fit fully in the outlet, reverse the plug. Do not change the plug in any way. If it still does not fit, contact a qualified electrician.

The electrical rating listed on the unit is based on the attachment that draws the greatest load.

Other attachments might draw significantly less power or current.

STOP: press this button to switch the machine off.

AUTO: press this button to process in continuous mode and achieve an even texture. Ideal for chopping, processing and blending finely, as well as for whisking, slicing and grating.

PULSE: press this button for intermittent processing. The machine automatically switches itself off as soon as you release this button, giving you complete control of the task from start to finish. Ideal for rough chopping or processing.

For preparations such as soups and purées, start by pressing the PULSE button, then switch to continuous mode. This way, you will achieve a smoother consistency.

We recommend you hold the pulse button for 2 seconds and then release.

Always press the "STOP" button before releasing the lid.

The appliance is fitted with a failsafe which will automatically switch the motor off if it starts to overheat due to prolonged use or overloading.

Press the "STOP" button and wait for the appliance to cool completely before switching it on again.

MAXIMUM PROCESSING CAPACITIES

	MINI PLUS
Brioche	0.4kg
Bread	0.4kg
Shortcrust pastry	0.5kg
Thin soup	0.6l
Minced meat	0.5kg
Carrots	0.6kg
Beaten egg white	2 to 4

Max proc. capacities are calculated for the main bowl

FITTING THE BOWL

Before using your appliance for the first time, wash all the parts thoroughly (except the motor unit)

1 Place the bowl on the motor unit with the handle to the left hand side.

2 Turn the bowl anti-clockwise as far as it will go making sure it firmly locks into position. The handle will now be at the centre of the motor unit.

3 Place the chosen attachment in the bowl (see details on following page).

4 Position the lid, completely flat, by placing the feed tube to the left of the handle.

5 Turn the lid in an anti-clockwise direction until the locking device clicks into position at the top of the handle.

WARNING

Double failsafe : the machine will only work if both the bowl and the lid are correctly locked into position

Stainless steel blade: place the blade directly in the main bowl, over the motor shaft.
Put the lid on, and lock into position.

BlenderMix: for use with the main blade. For small quantities place it in the bowl otherwise position it in the lid.

To slice: place the disc with its slicing blade facing upwards.

To grate: Place the disc with its grating blades facing upwards.

Discs: place the selected disc on the support, turning it gently in an anti-clockwise direction.

Lower the support, fitted with a disc, onto the motor shaft in the centre of the bowl.
Put the lid on and lock into position.

 Please be careful when handling the blades and disc as they are extremely sharp.

FITTING THE ACCESSORIES

Egg whisk: make sure to assemble the 4 parts correctly. Check that the metal shaft is correctly locked.

Place the egg whisk directly in the main bowl on the motor shaft. Put the lid on, lock it into position and remove the pusher.

Mini Bowl: fit over the central spindle inside the large bowl.

The small main blade also fits onto the support and locks into place when rotated in a slight anti-clockwise direction.

Place the mini blade on the motor shaft in the mini bowl.

Place the lid on top of the bowl ensuring it is completely flat with the feedtube to the left hand side of the handle and turn anti-clockwise until it clicks into place.

Please be careful when handling the blades and disc as they are extremely sharp.

USING THE CITRUS PRESS

Fit the citrus press basket onto the bowl and turn anticlockwise until it locks into position.

Select the cone according to the size of your citrus fruit. **The large cone should always be slotted onto the small one.**

Slide the cone onto the motor shaft. Place the lever arm opposite the locking system and clip the tab onto the bottom of the bowl.

Place the fruit on top of the cone and press down gently. Excess pressure is unnecessary and may cause damage

Lower the arm, to hold the fruit in place, switch the machine on and exert a little pressure on the arm until all the juice has been extracted.

Switch the machine off before raising the arm, to avoid any splashing. Gently release the pressure from time to time in order to extract as much juice as possible.

When juicing grapefruit, release the pressure very slightly occasionally, to extract the maximum amount of juice.

REMOVING THE BOWLS AND THE ACCESSORIES

Stop the motor and remove the lid by turning it clockwise.

You can then lift out the mini bowl, keeping the mini-blade inside.

Carefully remove the mini-blade, before putting the mini bowl down.

Carefully remove the blade, holding the rim away from the blades.

Next, remove the support by rotating it, retaining a firm grasp on the disc. The disc can also be left fixed to the support for cleaning.

Storage Box: To ensure safe storage of sharp blades please ensure accessories are placed in the correct position in the storage box.

Always unplug your appliance before cleaning it.

Use a soft sponge with hot water and washing-up liquid to clean the attachments.

To clean the bases of the stainless steel blade and the egg whisk, use a bottle brush.

The egg whisk can be dismantled for easy cleaning. Ensure you assemble all the parts correctly

Motor unit: wipe with a soft, damp cloth.

You must follow certain rules to avoid seriously damaging the removable parts:

- Dishwasher: select the minimum temperature (below 40°C / 100°F) and avoid the drying cycle (generally above 60°C / 140°F)
- Washing by hand: do not leave the parts to soak in detergent for too long. Avoid abrasive products (e.g. Brillo, pads).
- Detergents: read the instructions for use to check their compatibility with plastic items.

Do not soak the parts. Wipe after washing.

Be sure to wipe your stainless steel parts to avoid oxidation marks. They do not affect the quality of the blades, discs and bowls.

Some foodstuffs such as carrots tend to stain plastic. Rubbing with a piece of paper towel and a little vegetable oil will remove most of the staining.

Always handle the blades and discs with care, as they are extremely sharp. Never immerse the motor unit in water.

FUNDAMENTAL RULES

Never use your hand to push the food down the feed tube.

Never put any utensils or objects down the feed tube other than pusher provided.

Never attempt to chop bones (even small ones). The machine is not intended for this purpose. You will irreparably damage your main blade.

Liquids: Never fill the bowl more than one-third full. We recommend that you fill it below the top of the central spindle.

Solids: Never fill the bowl more than two-thirds full.

Always remove the pusher from the feed tube when whisking egg whites as they will not properly aerate with the pusher in place.

When using the Main Bowl or the Mini Bowl you can add either liquids or other ingredients via the feed tube.

The lid must be released before trying to remove the bowl. If you can not release the bowl it is because you have not released the lid.

Never exert too much pressure on the pusher when using the discs, otherwise the motor will slow down then stop. If this happens, press on the STOP button and wait a moment before switching the appliance back on.

You can slice and grate in one operation without emptying the bowl. Simply reverse the slicing/grating disc.

For small quantities you can in one operation slice, grate and make a vinaigrette or mayonnaise without emptying your bowl. Simply position the mini bowl above the vegetables in the main bowl.

Hold the top of the blade securely when tipping out the contents of the bowl.

SIMPLICITY

- **AUTO** button: the motor adapts its speed to the task at hand.
- **PULSE** button: for more control over the end result.
This is the setting you need for precision chopping or blending.
- Pop soft foods (e.g. meat, fish or soft cheeses) into the freezer for a few minutes to firm them up before chopping, grating or slicing them in your food processor.
NB. they should be firm, not frozen!

PRACTICALITY

- If you are carrying out several tasks in a row and do not want to spend your whole time washing up, begin your processing in the mini bowl, then move on to the large one. Start with the hard, dry ingredients and end with the liquid ones.
- If your appliance starts to vibrate, carefully wash and dry the feet, and check that you have not exceeded the maximum capacities shown on page 5.

**MINI BOWL**

- The mini bowl is ideal for processing small amounts. Use it to chop onions or herbs, mince meat, or whizz up dips, salad dressings and mayonnaise.
- Before chopping fresh herbs, check that both the herbs and the bowl are perfectly clean and dry. This will ensure that you get the very best results. The herbs will also keep for longer.
- You can use the mini bowl directly as a serving dish, providing you remember to remove the metal blade first!

**MAIN BOWL**

- Liquid ingredients: never fill the bowl more than a third full.
- Solid ingredients: never fill the bowl more than two-thirds full.

**METAL BLADE**

- When processing large amounts of meat or vegetables, cut the food into 2-cm pieces.
- If you are chopping meat or fish, use the pulse setting to control the end result.
- For vegetable purées, cut the cooked vegetables into large pieces before putting them in the bowl with the metal blade. Use the pulse setting first, then switch to continuous mode (AUTO) until the vegetables reach the desired consistency.

- Soft doughs (brioche, choux pastry, etc.): Magimix food processors work on the rapid kneading principle. Doughs are kneaded for 30 seconds to 1 minute - the exact time depends on the amount and type of dough. Follow the instructions carefully for each recipe.
- Normal doughs: for faster results, leave the dough to rise or prove at (or slightly above) room temperature.

As flour is very light, you may sometimes notice a cloud of flour escaping from the bowl. To avoid this happening, only add the liquids (water, milk, etc.) once you have put all the other ingredients (salt, flour, butter, eggs, etc.) in the bowl. You can then switch your food processor on.

- You can store dough in the freezer for up to 2 months, providing you wrap it carefully in cling film. Remember to take it out the day before you intend to use it.

BLENDERMIX

- Soups, pancake batters, cocktails: put the metal blade in the bowl first, then add all the ingredients. Next, position the BlenderMix in the bowl and switch your food processor on.

EGG WHISK

- Make sure your bowl is clean and dry.
- Remember to remove the pusher from the lid to let in enough air!
- Beaten egg whites: for lighter egg whites, use eggs that are at room temperature.
- Whipped cream: do not use fat-free or low-fat cream, as it will not whip! Make sure the full-fat whipping or double cream you use is chilled.
- Place the food processor bowl in the freezer for 10 minutes beforehand. If you can track it down, add some powdered stabiliser (e.g. Whip It) to the cream, as this will keep it stiff for several hours in the fridge.
- Keep a close eye on the cream while it is being whipped, to avoid it turning into butter.

CITRUS PRESS

- There are 2 cones: a small one for lemons and limes, and a large one for oranges and grapefruit.

- 2 tsp wine vinegar or 2 tbs lemon juice
- Salt and pepper

Mayonnaise

In the mini bowl fitted with the mini blade, place the egg yolks, half the vinegar or lemon juice and the mustard.

Blend for 20 seconds and with the machine still running pour the oil in via the feed tube.

Stop the machine when all the oil has been added and the mixture has become thick and creamy.

Add the remaining vinegar or lemon juice and seasonings, process briefly to mix them in.

Tips: for a softer mayonnaise, use a whole egg instead of just the yolk. The yolk must be at room temperature.

Preparation: 5 min.
Cooking: none

Ingredients
(for 1 bowl)

- 1 bowl mayonnaise
- 3 garlic cloves

Aïoli

Chop the peeled garlic cloves finely in the mini bowl, using the pulse button, then gently add them to the mayonnaise.

Herb mayonnaise

Chop the shallots and tarragon in the mini bowl (4-5 pulses).

Put the resulting mixture in a small, thick-bottomed saucepan with the vinegar, salt and pepper. Reduce* to half its original volume over a low heat.

Pour the reduction into the mini bowl. Add the egg yolks and pulse 3 times.

Add the diced unsalted butter and pulse 5-6 times until the sauce reaches the right consistency.

Serve with grilled red meat.

Tapenade

Stone the olives. In the mini bowl, place all the ingredients except the oil.

Store the tapenade in a cool place in a screwtop jar.

Preparation: 5 min.

Cooking: none

Close the lid and remove the pusher. Switch on.

When the cream is sufficiently stiff, add the icing sugar and switch the machine on for a few final seconds.

The preparation time will vary according to the type of cream you use. Make sure the cream is not over-whipped, otherwise it may turn to butter.

Preparation: 5 min.

Cooking: none

Ingredients

- 4 egg whites

Egg Whites

Break the eggs and separate them (the yolks can be kept for making custard, crème patissière, omelettes, etc).

Make sure the main bowl is perfectly dry and free from grease, then fit the egg whisk. Place the egg whites inside, fit the lid and **remove the pusher**.

Switch the machine on and immediately add a pinch of salt (for a savoury recipe) or sugar (for a sweet recipe) via the feed tube, as this helps to stiffen the beaten egg whites.
